

Correlation Functions and Quasiparticle Interactions in Condensed Matter

By Halley, J. W.

Book Condition: New. Publisher/Verlag: Springer, Berlin | This volume contains the proceedings of a NATO Advanced Study Institute devoted to the study of dynamical correlation functions of the form $\langle I \rangle = \langle e^{-\int_0^t dt' T} A e^{\int_0^{t'} dt'' T} B \rangle$ is an equilibrium average. In equation (1) it is useful to regard the product AB as the product of two operators in cases in which A and B refer to different spatial points in a condensed matter system and/or in which A and B behave dynamically in a quasi-harmonic way. In the second case, one has a two-quasiparticle correlation function and $CAB;AB(\omega)$ gives information about quasiparticle interactions. Condensed matter physics has increasingly turned its attention to correlation functions of this type during the last 15 years, partly because the two-point and/or one-particle correlation functions have by now been very thoroughly studied in many cases. The study of four-point and/or two-quasiparticle correlations has proceeded somewhat independently in several diverse fields of condensed matter physics and it was one purpose of the institute to bring experts from these different fields together to describe the current state of their art to each other and to advanced students. | I. General Theory.- Kubo and Zubarev...

Reviews

Thorough information! Its this kind of very good read. It is written in basic words and not hard to understand. You won't feel monotony at anytime of your respective time (that's what catalogues are for regarding should you question me).

-- **Roel Bogisich Sr.**

Very good e-book and valuable one. It can be written in basic words and phrases and not confusing. You will not really feel monotony at whenever you want of your own time (that's what catalogues are for concerning should you check with me).

-- **Mr. Antwon Frami**
