John Wiley and Sons Ltd, United States, 1996. Hardback. Condition: New. New. Language: English . Brand New Book. Climatic factors such as rain, snow, and other forms of precipitation can have a significant impact on the transmission of radio, light, or heat waves in the atmosphere. Communication systems may experience a loss of signal caused by the effects of rain on a radio link. Radar systems may experience interference that distorts the amplitude of the target signal. Any remote sensing system that relies on the propagation of electromagnetic waves must therefore be designed to take these factors into account. Electromagnetic Wave Propagation Through Rain was written to help system designers in such fields as meteorology, telecommunications, radar, and aircraft guidance systems face the challenge of predicting and compensating for these potentially serious weather--related effects on communication or remote sensing systems around the world and above the surface of the earth. Electromagnetic Wave Propagation Through Rain describes and analyzes the interaction between electromagnetic waves and various forms of precipitation. Interdisciplinary in approach, this book provides a solid in--depth treatment of the underlying physics as well as applications in communications, the aerospace industry, and meteorology. Through a combination of observations and models, Dr. Crane provides both students and practitioners of communication system design with a reliable statistical base for determining the frequency and severity of precipitation--generated attenuation episodes that can significantly impact on vital electromagnetic waves in the atmosphere. An invaluable book for professionals and advanced students in electrical, aerospace, and communications engineering, remote sensing, physics, and meteorology, Electromagnetic Wave Propagation Through Rain represents a significant addition to the literature and an important contribution to our understanding and management of this problem. Precipitation patterns can have a major impact on telecommunication and radar systems around the world. The frequency and duration...
