After the release of the \$96M political thriller The Manchurian Candidate starring Denzil Washington, it sparked a renewed underground interest in psy ops, mental programming and psychological conditioning techniques to create the super soldier. Has our government used such technology in their programs? The purpose of this book is to examine the assassinations of President John F. Kennedy and Robert Kennedy and the accused shooters, Oswald and Sirhan. We look at several bodies of evidence that point to the strong possibility of these two being patsies. Facts such as the magic bullet theory cooked up by the late Senator Arlen Specter to explain how the Oswald bullets were able to fly and reverse themselves in mid-air. Or the fact that the three alleged Oswald shots are still nearly impossible to duplicate even today. A fourth gun shot later uncovered. What of other applications. Can the mind actually be programmed like a computer? Can hidden powers of the mind be developed and reinforced? Is it true that we only use a very small percentage of our overall brain capacity? The author claims he uncovered and used such mental conditioning techniques while going back to school for nursing full-time at age 45. He said that such intense academic programs require students to learn some 300 to 2400 facts each week and pass exams every two weeks. He states he was able to use this mind technology to get straight A s.
