Not illustrated. 1916 Excerpt: .and 1178 urinary only examinations, the latter form consisting of a certain number of questions bearing on the health record, and a careful laboratory examination of the urine. While these figures are not large, they furnish an interesting as well as instructive study. In observing the following tables, showing the relative frequency of impaired and unimpaired risks, it must be considered that many, and perhaps the majority of these policyholders who availed themselves of a full physical examination, did so because they felt that their health was not of the very best, or, at least, were suspicious of some physical impairment. This is, no doubt, the explanation of the high percentage of impaired lives. The following table of full health examinations is interesting as showing somewhat the distribution by ages of impairments as follows: As might be assumed, the highest ratio (22 ) of unimpaired risks is among the youngest, the lowest ratio (5 ) among those of 60 years old or older. Likewise, among the young it is to be found the lowest ratio of impaired risks (62 ) as against 86 for those 60 years old or older. From 16 to 26 of the policyholders put certain impairments in their examination blanks which Medical Examiner did not consider serious enough to note. Relative to the nature of the impairments and to their number, we have listed the cases in accordance with the most serious ones that were found. Excluding the 76 insured who were...
